YXT Triples Premarket on No New Headline — a Sub-5M Float Doing Float-Squeeze Math

August 5, 2026 — 8:42 AM EDT · Report #99 · Free Equity Reports Research

◆ DESK TAKE

Up ~200% premarket Aug 5 on no fresh news — pure float squeeze, with volume rotating the sub-5M float multiple times before the open. Structure cuts both ways: post-ratio-change float is tiny, but a \$100M F-3 shelf sits live over a \$40M cap, so supply can appear fast. Watch ~\$11.50 (52-week high, rejected premarket) as resistance and ~\$6.60 (premarket VWAP) as support into the open; halt risk elevated.

DATA BOX

Price	\$7.72
Change	+196.92%
Volume	17.29M
Float	4.58M
Mkt cap	\$41.66M

MECHANICS

Roughly 5.4M ADSs outstanding with a ~4.6M float following a one-for-ten ADS ratio change effective July 14, 2026 — a reverse split in effect. A \$100M universal shelf (Form F-3) filed December 2025 remains live over a ~\$40M market cap. The company regained Nasdaq minimum bid price compliance on July 30, 2026, and reported a deepening net loss for FY2025.

[YXT.com](#) is up roughly 200% in Wednesday premarket trade, August 5, on volume that rotated its entire float several times over before the opening bell. Note the number that matters most: this ADR averaged a few thousand shares a day over the past month. The premarket tape printed millions. When supply that thin meets demand that heavy, price discovery gets

violent — the premarket range ran from just above Monday's close to a print past the 52-week high before settling back.

Here's the part a trader needs straight: there is no fresh headline this morning. The last company news hit five days ago, when [YXT.com](#) announced it had received a notification letter from Nasdaq's Listing Qualifications Department, dated July 30, 2026, confirming it regained compliance with the minimum bid price requirement under Listing Rule 5450(a)(1). The stock actually drifted lower after that release, closing Monday August 3 at its lows. Today's move is structural — a float squeeze on a starved order book — not news-driven.

The paper trail

The compliance cure itself was mechanical. Nasdaq notified [YXT.com](#) on January 28, 2026 that its ADSs had closed below US\$1.00 for 30 consecutive business days, and the fix came via a one-for-ten ADS ratio change effective July 14, 2026 — a reverse split in everything but name, which shrank the ADS count to the sub-5M float driving today's action. The business behind the ticker: a Suzhou-based provider of AI-enabled enterprise productivity solutions, offering digital corporate learning through a SaaS model. Know the supply risk too: the company filed a \$100M universal shelf registration on Form F-3 in December 2025, and its 2025 results showed the AI-first shift lifting margins but deepening the net loss. A live shelf over a \$40M market cap means paper can hit this tape fast at these prices.

How it might trade

Premarket VWAP sits near \$6.60 — that's the line between longs in control and a fade back toward the old range. Overhead, the 52-week high around \$11.50 is the obvious wall; the premarket blow-through and rejection there makes it resistance until proven otherwise. Halt risk is real — this name was halted news-pending in mid-July — so size for gaps, not smooth exits. If volume dries up after the open, the squeeze math runs in reverse just as fast.

This is not investment advice; do your own research and size accordingly.

MECHANICS BOX — THE STRUCTURAL READ

- Shares outstanding: 5.40M · Float: 4.58M
- Dilution-relevant SEC filings (30d): none found in the last 30 days
- Splits: 1-for-10 reverse (2026-07-14)
- Roughly 5.4M ADSs outstanding with a ~4.6M float following a one-for-ten ADS ratio change effective July 14, 2026 — a reverse split in effect. A \$100M universal shelf (Form F-3) filed December 2025 remains live over a ~\$40M market cap. The company regained Nasdaq minimum bid price compliance on July 30, 2026, and reported a deepening net loss for FY2025.
